

## Performance White on Black 20%

**Performance White on Black 20%** is part of Contra Vision's premium range of perforated window films, made from high-performance, thick calendered polymeric face-films.

The product is manufactured to exacting standards to provide high quality printing, minimal shrinkage and problem-free installation and removal.

White on Black perforated window films for one-way vision are typically applied to the outside of windows with the graphics facing outwards and the black side facing inwards.

We recommend **Performance White on Black** for use on longer term applications, vehicle graphics and any other arduous applications.

20% transparency provides maximum vibrancy to the printed image, maximum privacy and maximum protection from solar heat gain, glare and UV radiation. The level of through-vision is still acceptable for most static applications, particularly with full window coverage.

The thickness and durability of the polymeric vinyl formulation means that an overlamine is only needed in locations where the graphics will be exposed to rain and/or dirt where constant through-vision is an essential requirement or in situations when the films are exposed to abrasion or chemical washing.

### Product Specification

Product name	Performance White on Black
Product code	WPAG20
Transparency	20% (80/20)
Application	Outside
Roll width	1370 mm
Roll length	10 m / 50 m
Primary uses	Building Wraps, Outdoor Advertising

“ Maximum vibrancy to the printed image, maximum privacy and maximum protection from solar heat gain. ”

Application on a high entrance panel

Application on a balustrade
