

Performance White on Black 30%

Performance White on Black 30% is part of Contra Vision's premium range of perforated window films, made from high-performance, thick calendered polymeric face-films.

The product is manufactured to exacting standards to provide high quality printing, minimal shrinkage and problem-free installation and removal.

White on Black perforated window films for one-way vision are typically applied to the outside of windows with the graphics facing outwards and the black side facing inwards.

We recommend **Performance White on Black** for use on longer term applications, vehicle graphics and any other arduous applications.

30% transparency is the standard choice for retail windows with strong image impact and good through-vision from inside stores.

The thickness and durability of the polymeric vinyl formulation means that an overlamine is only needed in locations where the graphics will be exposed to rain and/or dirt where constant through-vision is an essential requirement or in situations when the films are exposed to abrasion or chemical washing.

“ The standard choice for retail windows with strong image impact and good through-vision from inside stores. ”
