

Series IJ70; Series SP70

Product Bulletin

Product Description

These cast films offer great versatility making them perfect for indoor and outdoor signs and fleet graphics.

Description

Product Line Inkjet printing IJ70-10 white, opaque, glossy, permanent adhesive.

IJ70-114 transparent, glossy, permanent adhesive.

Screen printing SP70-10 white, opaque, glossy, permanent adhesive.

SP70-114 transparent, glossy, permanent adhesive.

Product Characteristics

These are typical values for unprocessed products.

Contact your 3M representative for a custom specification.

Physical & Application

Material cast vinyl Surface finish glossy

Thickness (film) 50 µm (0.05 mm)

Adhesive type solvent acrylic; pressure-sensitive
Adhesive appearance grey, except for transparent versions
Liner double-sided Polyethylene coated paper

Adhesion approx. 20 N/25 mm FTM 1: 180° peel, substrate: glass; cond: 24 h 23°C/50%RH

Application method wet or dry

Applied shrinkage < 0.1 mm FTM 14

Application temperature +10°C minimum (air and substrate)

Service temperature -60°C to $+107^{\circ}\text{C}$ Surface type flat to curved, incl. rivets

Substrate type aluminum, glass, PMMA, PC*, ABS, paint

PC*, PETG*: Might require drying with heat before use

Graphic removal Fair to remove with heat and/or chemicals from supported substrates.

No liability is given for ease or speed of removal of any graphic. Pay attention to

adequate air and substrate temperature.

Storage Shelf life Use within 2 years from the date of manufacture on the sealed original box.

Use within 1 year after opening the box.

Storage conditions $+4^{\circ}\text{C}$ to $+40^{\circ}\text{C}$, out of sunlight, original container in clean and dry area.

Flammability Flammability standards are different from country to country. Ask your local 3M contact for details, please.

Durability

Unprocessed film
The following durability data are given for unprocessed film only!

3M[™] MCS[™] Warranty In addition, 3M provides a warranty on a finished applied graphic within the

framework of 3M[™] MCS[™] warranty program.

Climatic zones Graphic durability is largely determined by the climate and the angle of exposure.

Find below a table showing the durability of a product according to the angle of

exposure and the geographical location of the application.

Zone 1 Northern Europe, Italy (north of Rome), Russia

Zone 2 Mediterranean area without North Africa, South Africa

Zone 3 Gulf area, Africa

Exposure types Vertical:

The face of the graphic is $\pm 10^{\circ}$ from vertical.

Nonvertical:

The face of the graphic is greater than 10° from vertical and greater than 5° from horizontal.

Interior: Interior means an application inside a building without direct exposure

to elements.

Vertical outdoor exposure	Zone 1	Zone 2	Zone 3
white transparent	8 years 6 years	7 years 5 years	5 years 4 years
Non-vertical outdoor exposure	Zone 1	Zone 2	Zone 3
white transparent	4 years 3 years	3.5 years 2 years	2.5 years 2 years
Interior application	Zone 1	Zone 2	Zone 3
interior	8 years	8 years	8 years

Limitations of End Uses

3M specifically does not recommend or warrant the following uses, but please contact us to discuss your needs to recommend other products.

Graphics applied to

- flexible substrates incl. 3M[™] Panaflex[™] Awning and Sign Facing 945GPS and 3M[™] Panagraphics[™] III Wide Width Flexible Substrate.
- low surface energy substrates or substrates with low surface energy coating.
- other than flat or moderate curved/corrugated surfaces.
- painted or unpainted wallboards, gypsum boards and wallpapers.
- stainless steel.
- surfaces that are not clean and smooth.
- surfaces with poor paint to substrate adhesion.

Graphic removal from

- signs or existing graphics that must remain intact.

Graphics subjected to

- gasoline vapors or spills.

Important Notice

- 3M Commercial Graphics Division products are not tested against automotive manufacturer specifications!

Graphics Manufacturing

Graphic protection can improve the appearance, performance and durability of printed graphics. Any printed graphic exposed to abrasive conditions (including vehicles), harsh cleaners or chemicals must include graphic protection in order to be warranted.

When to use an overprint clear or overlaminate

See instruction bulletin GPO 'graphic protection options' for further information about selection and use of protective overlaminates and printable clears.

> Product Bulletin Graphic Protection Options <

Shipping finished graphics Flat, or rolled film side out on 130 mm (5 inch) or larger core. These methods help to prevent the liner from wrinkling or application tape, if used, from popping off.

Converting Information **Inkiet Printing**

A too high total physical ink amount on the film results in media characteristic changes, inadequate drying. overlaminate lifting, and/or poor graphic performance. The maximum recommended total ink coverage for this film is 270%.

Adequately Dry Graphics

Inadequate drying can result in graphic failure including curling, increased shrinkage and adhesion failure, which are not covered under warranty. Build enough time into your process to ensure adequate drying of the graphic.

Poorly dried film becomes soft and stretchy, and the adhesive becomes too aggressive. 3M recommends at least a minimum drying time of 24 hrs before further processing. Dry the graphic unrolled or at least as a loose wound roll standing upright.

Converting Information

Formulations and processing conditions can affect ink durability. Refer to the 3M Product and Instruction Bulletins for your ink for limitations and proper usage. Graphic protection can improve the appearance, performance and durability of your graphic.

Screen Printing

A clear coat also prevents chalking on unprinted films. Use equipment designed to handle high viscosity materials and make sure the coating is evenly applied to the specifications given in the clear's Instruction Bulletin.

Application

See product bulletin ATR 'application tape recommendations' for information about selection and use of suitable application tapes for this product, please.

> Product Bulletin Application Tape Recommendations <

Refer to Instruction Bulletin 5.1 'select and prepare substrates for graphic application', for general application information.

>Instruction Bulletin 5.1 'select and prepare substrates for graphic application'<

Maintenance and Cleaning

Use a cleaner designed for high-quality painted surfaces. The cleaner must be wet, non-abrasive, without strong solvents, and have a pH value between 3 and 11 (neither strongly acidic nor strongly alkaline).

Refer to Instruction Bulletin 6.5 'storage, handling, maintenance and removal of films and sheetings', for general maintenance and cleaning information.

>Instruction Bulletin 6.5 'Storage, Handling, Maintenance and Removal of Films and Sheetings'<

Remarks

This bulletin provides technical information only.

Important notice All questions of warranty and liability relating to this product are governed by the terms and conditions of the sale, subject, where applicable, to the prevailing law.

> Before using, the user must determine the suitability of the product for its required or intended use, and the user assumes all risk and liability whatsoever in connection therewith.
