

Product Focus

Performance HD White on Black

Performance HD White on Black is a 40% transparency (60/40) perforated window film for one-way vision graphics, manufactured to the high specification of our *Contra Vision® Performance™* range.

The 1mm diameter holes are 60% smaller in area than standard one-way vision window film. This break-through micro perforated window film delivers the clearest and sharpest window graphics including small type and vivid color textures.

The smaller holes also means that less rainwater accumulates in non-overlaminated applications. Tests show that the evaporation time to unblock the holes is reduced by 50%.

From inside the see-through is noticeably improved. The perforations are so small that they cannot be seen from as little as 1.5 meters from the window compared with 3.5 meters for standard perforated vinyl.

You can use *Performance HD White on Black* anywhere that standard perforated film is used, as well as in thousands of places previously not considered. The refined texture and superior appearance will amaze anyone who ever questioned the image quality of perforated window films.

“ It results in high definition quality images, with greater detail than ever before and also provides a smoother see-through from inside. ”
